

# E-mail Archiving

Our affordable, reliable and secure hosted E-mail archiving service helps customers of all sizes meet compliance, litigation support, storage management and best practice requirements.

By leveraging a global cloud computing and storage infrastructure we are able to provide your organization with an extremely scalable, 100% software-free service, at an industry low price point.

## Automatic Back-Up of Messages and Attachments

- All inbound and outbound messages are captured in a secure and tamper-proof archive of all correspondence.

## Lifetime Retention with Unlimited Storage

- Subscriptions include unlimited storage and lifetime message retention.
- Remove the strain on your e-mail servers without expensive hardware.
- Allow users to delete e-mail with the knowledge that any items can be retrieved from the archive if needed later.

## Powerful Search and Retrieval At All Times

- All data is kept online and is immediately accessible for searches. Other hosted archive vendors migrate your older data to near-line storage systems, dramatically increasing the amount of time required to search. You'll be able to search, retrieve and export messages and attachments in seconds by keyword, sender or recipient, date range and more.

## Reliable, Redundant Data

- All archived data is replicated across multiple data centers. SSL encryption and adherence to DoD AES standards ensure that no data is accessible in clear-text.

## Supports All Major Messaging Environments

- Data collection technology supports all messaging systems (Microsoft, Novell, IBM, Zimbra, Scalix, IMail Server, Mailtrust, Keiro and many more) making the solution truly future-proof.

## Satisfy E-Discovery and Compliance Challenges

- E-mail archiving can help your organization be compliant with archiving regulations for SEC, FINRA, NASD, HIPAA, Sarbanes-Oxley, Gramm-Leach-Bliley, and more. With secure capturing and full text indexing of all e-mails and attachments, compliance requests can be fulfilled quickly and easily. Securely capture, index and store multiple copies of auditable e-mail for easy retrieval through our easy-to-use search and discovery interface.

## Establish a Corporate Knowledge Management System

- Designed to accommodate compliance archiving as well as storage resource management. You can archive everything for all users—all inbound and outbound messages.
- Provides the ability to audit employee e-mail for harassment, improper disclosure, sharing of confidential data, and more.
- Easily monitor e-mail activity to ensure compliance with corporate policy or regulations.

## Offload Message Storage from Your Mail Server

- Tired of an endlessly growing storage problem with your e-mail as your organization grows and time passes? CompuWorks E-mail Archiving can help. Reduce the amount of e-mail on your servers and declutter inboxes with total peace of mind.
