

E-mail Filtering Services

Protect your company from SPAM, identity theft and infected e-mail

Are you tired of sifting through the junk?

How much time do you and your employees lose simply by having to look at and delete all of the garbage e-mail you receive every day?

What are the ramifications of employees being subjected to the constant barrage of obscene content they receive?

Are you tired of scammers trying to steal confidential information?

Are you letting infected e-mail inside the walls of your network?

Benefits of e-mail filtering

Increase productivity: Users report saving at least 15 minutes per day, well over 5 hours per month of productive time.

Protect your data: Virally infected e-mail never reaches your mail server, protecting you from potentially costly and time-consuming virus removal.

Protect Your Staff: You and your staff are protected from the scams that try to steal your personal financial information.

Free Up Resources: Your mail server only has to work to process good mail instead of high volumes of garbage. You reap the benefits of lower bandwidth costs, lower e-mail server utilization, and potentially lower e-mail archival capacity demands.

CompuWorks Basic E-mail Filtering Service

How it works

Your mail is directed to our servers and is quickly and efficiently scanned for language, content, viruses, scams, etc.

“Good” mail is sent through. “Bad” mail is quarantined outside of your network.

Users receive a daily e-mailed report of all mail quarantined on the prior day, with options to deliver any e-mail or white list specific senders.

Your quarantine is web-based and password protected and allows users to manage settings, view quarantined e-mail, etc.

CompuWorks retains a secure backup that contains the last 96 hours of e-mail traffic, so if your mail server or network goes down or you lose Internet connectivity, you don't lose e-mail.

CompuWorks Advanced E-mail Filtering and Management Service

How it works

We install our advanced mail gateway agent on your hardware. All mail bound for your mail server is filtered through this gateway.

“Good” mail is sent through. “Bad” mail is quarantined.

Users receive a daily e-mailed report of all mail quarantined on the prior day, with options to deliver any e-mail or white list specific senders.

Your quarantine is web-based and password protected and allows users to manage settings, view quarantined e-mail, etc.

Advanced E-mail Diagnostic Tools

One of the most important features of the Advanced solution is the ability to rapidly and efficiently troubleshoot e-mail problems. Issues with blacklisting or rejected messages can be more quickly diagnosed and resolved using the tools that are bundled with this service—a critical capability for e-mail intensive organizations.

What's Included

- 24 x 7 x 365 monitoring
- Software updates
- Anti-virus protection
- Global white-listing and black-listing
